Catena-X: What is in it for me?

Strategy & Onboarding Advisory

Catena-X aims to create a **data ecosystem** that enables every player along the **automotive value chain** to derive the greatest possible benefit from cross-company data at the product, service, process and organization/ business levels.

Catena-X as enabler of digital ecosystems

"Providing the most user-friendly environment for building, operating and collaboratively using an end-to-end data chain along the entire value chain."

Source: Catena-X

What can Catena-X offer to your company?

A Data-Driven Business Ecosystem: In this kind of ecosystems, data is the strategic resource used by the members to jointly create innovative value.

Use-Case driven: First use cases that exploit the advantages of comprehensive data chains are being implemented and can be augmented by individual business apps.

Trust & Security: On the one hand, business value for every partner comes into effect only by sharing, on the other hand, intellectual property must be protected.

Data Sovereignty as a key concept: Compliant with secured data space standards (e.g. IDS & GAIA-X), Catena-X enables you to self-determine which data can be accessed by whom, how, when and at what price.

An open environment: The Catena-X network is open, linking users and vendors. The technologies are scalable for all sizes of businesses.

Current use cases for Catena-X cover for example CO2 reporting, Traceability and Circular Economy

Manufacturing as a Service	Real-time control	Modular production	Digital Twin
Utility Service	CO_2 Footprint Proof	Q-Management	Circular Economy
Traceability (e.g. Supply Chain Act)			
Business Partner Management (e.g. Golden Record Master Data)

Detecon Advisory Services lead to the roadmap to unleash the individual value from joining Catena-X.

Exemplary aspects to assess benefits, costs and risks:

》 At what point in time should I get involved? What risks do you run if you get involved too late?

》 How does that fit with your cloud strategy? Do we have to throw everything around and go into vendor lock-in?

》 How can this approach help me in general to become a data-centric company?

》 We produce mainly outside the EU, why should we be involved here?

》 Can we participate in the design of use cases under development? How can I bring in my own business apps?

》 What other business benefits can be generated in this network beyond the use cases, for example through data-centric business models?

With our Advisory Approach, you can gain your first practical experience in the company's own environment as well as plan the concrete implementation.

Proof of Concept

Strategy & Roadmap

Gather experience using a use case in your own environment and demonstrate the benefits to your stakeholders.

Adjust your strategy based on the data economy, understand the implications, and update the project portfolio & roadmap.

Why Detecon? We live what we advise!

UNIQUE: Ready to use technology available from Detecon and T-Systems in order to start your individual Proof of Concept right now.

PROVEN: Get a head-start towards Catena-X onboarding by utilizing our proven technology and approach - Data Thinking Method and Data Intelligence Hub (worldwide the first available IDS data space).

FRONTRUNNER: As part of the Catena-X consortium, we ensure the developed strategy is always compliant to latest Catena-X development.
